Toluwalope Emmanuel Adegoke

Frontend Software Engineer | React, TypeScript, Next.js, Tailwind CSS, Postgres
Lagos, Nigeria | tolu.nuell@gmail.com | +234 906 514 6579 | tnuell.sbs | github.com/ulot2 | linkedin.com/in/tnuell

SUMMARY

Frontend software engineer with 3 years of hands-on React, TypeScript and Next.js experience, owning work end to end in small teams: interface, state, API routes, Postgres schema, tests and CI. Co-founded SoloStack and built all 39 screens and the interface for 51 API routes over Postgres via Prisma. Built a social media planner that FireSwitch acquired, where I now intern on the same product. Shipped a real-time collaborative editor with 22 integration tests.

TECHNICAL SKILLS

- **Core (daily):** React 19, TypeScript, Next.js 16 (App Router), Tailwind CSS 4, JavaScript (ES6+), HTML5, CSS3
- **Full stack:** Next.js API routes, REST API integration, Postgres via Prisma, Drizzle, Supabase, Convex, NextAuth, Better Auth, Zod, Cloudflare Workers, D1 and R2
- **Testing and CI/CD:** Vitest, React Testing Library, node:test, Playwright, axe-core, GitHub Actions (test on every push, deploy on green main)
- **Tools:** Git, GitHub, Vercel, Figma, Chrome DevTools, Lighthouse, Claude Code

EXPERIENCE

Frontend Developer Intern

FireSwitch | March 2026 - Present

- Wired Renisocial's post publish and schedule flows to the backend REST API in React 19, TypeScript and React Router 7, working from the backend team's endpoint reference.
- Found and documented four backend publishing bugs during that integration, each with the failing request, the error and the expected behaviour. Three were fixed the same day.
- Rebuilt Zofu, an AI tool that tailors resumes to job postings, from Next.js to plain React in one month, and connected it to the existing Supabase backend.
- Built onboarding screens for ValSafe, the company's incident reporting platform, and fixed a Tailwind image-overlay bug that broke the onboarding layout.
- Now on the team preparing Renisocial for launch: the product FireSwitch acquired from me, which I first built as PostFlow.

Independent Frontend Developer

Self-directed product work | 2023 - Present

- Built production web apps in React, Next.js and TypeScript end to end: auth, dashboards, onboarding, admin tools and public pages, live on Vercel and Cloudflare.
- Wrote integration and unit tests and set up GitHub Actions to run them on every push. Debugged layout faults that appeared only on specific browsers and screen sizes.

PROJECTS

SoloStack - business management SaaS for African freelancers

Co-founder and frontend lead | solostack.ng | Launched 1 September 2026

- Built all 39 screens and the interface for 51 API routes: client CRM, proposal builder, project tracking, onboarding, billing settings and public freelancer portfolios. Reached 24 waitlist signups before launch.
- Scored 93 performance, 97 accessibility, 96 best practices and 100 SEO on Google Lighthouse. Next.js 16, React 19, TypeScript, Tailwind CSS 4, Prisma, NextAuth, Zod.

Museum of Ordinary Things - turns the story of an everyday object into a museum exhibit

moot.tnuell.sbs | Next.js 16, React 19, TypeScript, Tiptap, Cloudflare Workers (OpenNext), D1, R2, Drizzle, Better Auth

- Built 17 pages, including a three-step exhibit editor on Tiptap that saves a moment after the writer stops typing. Version checks stop a stale tab from overwriting newer saves, and visitors can write and preview before they sign in.
- Publishing saves a separate snapshot, so later draft edits never change the public page. Unpublishing revokes the page, its photograph and its share card at once. The browser draws the share card, because Workers Free has too little CPU time to draw it on the server.

cowrite - real-time collaborative writing tool

cowrite.cowrite.workers.dev | github.com/ulot2/cowrite | React Router 7, React 19, TypeScript, Yjs, Cloudflare Workers, Durable Objects, D1, Better Auth

- Built a shared editor where several people write one document at once with live cursors, comments, suggestions, named versions, version compare and restore, and role-based sharing. A tab that goes offline keeps working and merges cleanly when it returns (Yjs CRDT).
- Wrote 22 integration tests on node:test across offline merge, comments, history, review and sharing. GitHub Actions runs typecheck and tests on every push, then applies database migrations and deploys to Cloudflare on green main.

Hallway - GitHub Action that reviews UI copy and structure on every pull request

github.com/ulot2/hallway | JavaScript, Playwright, axe-core, Storybook, GitHub Actions, Jev (TypeSafe AI)

- axe-core decides every rule a linter can check. The AI model is asked only judgment questions, such as whether an error message tells the user how to fix the problem, and each finding's probability decides whether it blocks the build, shows as advice or stays silent.
- Measured the model against 101 findings I labelled blind and retired the two questions it judged near chance. 78 tests on node:test; CI builds a real Storybook and reviews it end to end.

Dee's Agora - online debate community

deesagora.online | 39 active users | Next.js 16, React 19, TypeScript, Supabase, Prisma, NextAuth, Resend

- Built 33 screens across three user roles: a public site with debates, voting and volunteer sign-up, a debater area, and an admin area for running debates, polls and users.
- Email reminders go to an outbox that a GitHub Actions cron drains every five minutes, with a lease so late runs never overlap.

Secondlook - checks application files against the instructions, in the browser

In progress | Next.js 16, React 19, TypeScript, PDF.js, Web Workers, node:test

- Reads PDF and Word files in a web worker and checks page counts, word counts, file sizes and formats against a checklist the applicant confirms. Files never leave the browser: no upload endpoint, analytics or storage.
- 22 tests on generated PDF and Word files cover scans, encrypted and corrupted files, exact limit boundaries, cancellation and timeouts. A file it cannot read is never reported as a pass.

BAMSSALADS Quiz Club - quiz platform for a university faculty

Live | Next.js (App Router), Prisma, Postgres, NextAuth, Tailwind CSS | July to September 2026

- Admins build quizzes and assign them to students, who practice online. Live stage competitions run on a moderator console, a projector screen and a buzzer on every phone.

EDUCATION

- **Ladoke Akintola University of Technology** - B.Tech, Physiology, 2024. Self-taught frontend developer since 2020.
- **freeCodeCamp** - Responsive Web Design certificate, 2022.
